

# 2023 Recharge Academy

July 31, 2023 – August 3, 2023

The 2023 Academy returns our focus to offshore wind energy and wind technology as we return to the East Coast. Our team looks forward to building offshore wind turbines and testing them at an actual beach! You can plan on packed days learning about the politics, technologies and economics of renewable energy coupled with a range of engaging activities you can use with your students around energy concepts.

Now in its 17th year, the REcharge Academy is our flagship educator training program focused on renewable energy. The intensive training blends lectures from experts and tours of energy facilities with replicable hands-on K-12 lessons. At the 2023 REcharge Academy we will launch new offshore wind activity guides funded by the NJEDA, in addition to materials from KidWind, NEED, WhiteBox Learning and Vernier.

Over 550 educators of all types have attended our REcharge Academies from all over the world and have impacted thousands of students and educators. Once an educator attends a REcharge Academy, they are considered a REcharge Instructor for life and become part of our extended family! Instructors may just incorporate lessons and curriculum into their own classrooms, or they may go further and work with local schools and districts to share the resources they've explored or train other teachers in wind and solar.

REcharge Instructors are critical actors who can help educate the world about renewable energy. They also help our team develop and test new materials and help KidWind hold regional KidWind Challenges. We estimate that each year our network of Instructors train at least 1,000 educators and impact 30,000 students through workshops and outreach events.

**Location & date:**

Stockton University

Atlantic City, NJ

July 31, 2023 – August 3, 2023

**Registration Fee:**

0 - \$1500

Scholarships are available
